Maps Of World's Unique Tool To Explore Places With Identical Names

New Delhi, 12th February 2008: Maps of world has been constantly striving to provide something new to its browsers. The Same Place Different Location link available on MapsofWorld.com offers the browsers accurate information regarding places with same names. Though these places have identical names, they are located in different parts of the world. At times one may also find places with similar names located within different states of the same country.

A site visitor can access this tool by clicking on the Same Place Different Location link provided in the New On MapsofWorld link as well as New Product Launches section on MapsofWorld.com. This takes one to the Same Place Different Locations index page where one can easily search for a place, view its location on the map, and also see details of all those places which bear similar names.

To access further information about a particular place, one needs to click on the pointers on the map. For example, if there are five places in the United States of America by the name of Alpine. These are located in the states of Utah, New Jersey, California, Wyoming and Texas. The search results point out the precise location of these places on the map of the country. By clicking on these links one comes to know about their latitudinal and longitudinal extent, their approximate area, population, etc.

Thus, Same Place Different Location on MapsofWorld.com may be regarded as an innovative tool for acquiring precise information about places with similar names.

About MapsofWorld.com

MapsofWorld.com is portal conceived, designed and owned by Compare Infobase Limited, and managed by MapXL Inc - which represents the portal in the global market. Since its inception in 2003, Mapsofworld.com has grown phenomenally – in terms of information as well reach.
